PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience across React.js, Node.js, and Supabase/SQL databases — spanning schema architecture, secure REST API integration, and real-time feature delivery. Proven track record turning ambiguous requirements into production-ready features within collaborative, Git-based Agile workflows. Currently pursuing MCA eager to contribute to building reliable, high-impact systems.

EDUCATION

Vishwakarma University *Pune, Maharashtra, India*
Master of Computer Applications (MCA); CGPA: 8.89 (Pursuing) *2025 – 2027*

Modern College of Arts, Commerce & Science (SPPU) *Pune, Maharashtra, India*
Bachelor of Computer Application (BCA); CGPA: 8.20 *2023 – 2025*

SKILLS SUMMARY

Languages:	JavaScript, Python, Java, HTML5, CSS3
Frontend:	React.js, Component-Based Architecture, Accessibility, Responsive UI, Tailwind CSS
Backend & APIs:	Node.js, Express.js, Django REST Framework, REST APIs, JWT Authentication, Supabase, Edge Functions
Database:	PostgreSQL, MySQL, SQLite (Schema Design, Query Optimization, RLS)
Tools & Practices:	Git, GitHub, Docker, Docker Compose, Linux CLI, Postman, VS Code, Supabase Realtime

WORK EXPERIENCE

Full Stack Developer Intern – Levia Technology *Jul 2026 – Sep 2026*

- Developing reusable React and Tailwind components for touchscreen kiosk applications, translating Figma designs into responsive production interfaces.
- Architected a normalized PostgreSQL schema in Supabase spanning tables for a retail kiosk platform, implementing Row-Level Security (RLS) policies to enforce strict customer/admin data separation.
- Engineered real-time admin tooling using Supabase Realtime subscriptions to instantly sync bulk discount updates and dynamic storefront theming across all active kiosk sessions.
- Developed an admin dashboard for real-time inventory and order-fulfillment tracking, giving non-technical staff self-service visibility into stock levels.

PROJECTS

NexBank – High-Integrity ATM Transaction System *Node.js, Express.js, SQLite, JWT*

- Achieved zero transaction data loss across 500+ test operations by implementing ACID-compliant SQLite transactions with WAL journaling.
- Mitigated session-hijacking risk by implementing JWT-based authentication with immutable audit-trail logging (IP capture, pre/post-balance states).
- Built a structured RESTful API layer in Express.js enforcing OOP patterns to isolate deposit, withdrawal, and transfer service modules.

QuickRent – Full Stack Rental Marketplace *React.js, Django, MySQL, Razorpay API, JWT*

- Reduced frontend load time by ∼40% (Lighthouse) by constructing a component-based React.js UI with lazy loading and accessible markup.
- Achieved zero downtime across 8 core endpoints (verified via Postman tests) using Django REST Framework and JWT authentication with layered OOP services.
- Cut database query response time by 60% through targeted indexing across a normalized MySQL database schema.
- Integrated Razorpay payment gateway end-to-end alongside booking-availability tracking in a 2-week Agile sprint workflow.

CloudPilot AI – Container Monitoring Dashboard *React.js, Node.js, Recharts, Dockerode*

- Cut container fault-detection time from 5+ minutes to under 3 seconds using a real-time React.js dashboard with Recharts visualization.
- Engineered an Express.js backend streaming metrics from Docker daemon every 2.5 seconds across 10 concurrent containers with structured logging.
- Improved developer observability by translating complex container telemetry into a clean, accessible interface for other engineers to extend.

CERTIFICATES & ACHIEVEMENTS

- **AI for India – AI-Driven Development Specialist**
- **Cybersecurity Fundamentals**
